

Imprest work flow

Version : v3.11 or v3.12 or later

The impost module allows a pharmacy or warehouse to decide on quantities of drugs its receiver facilities (customers or [Virtual stores](#)) should receive. Periodically a stock take is carried out at the customer's site and drugs are replenished to meet the predefined (imprest) level.

The tutorial below suggest how an impost should now be carried out.

We will assume that the facility or customer has been assigned with a suitable impost list. If this is not the case then please do the following:

- Select Item > Show Item master list... from the menus to create a master list (see [here](#) for details).
- Assign the master list to the customer. See [Names: Using, adding and editing, the Item lists tab](#) for instructions.

Create an Imprest

Click on 'Requisitions' in the 'Customer' (or Patients!) tab.. Click on the *New customer impost* icon in the window which appears.

Type the first few characters of the customer name in the Name field and press tab. A List of matching customers is displayed (unless only one customer name matches what you entered). Choose the intended customer and click the *Use* button.

At this point the master list of items associated with the customer is displayed in its default sort order.

Print the imprest

The image below shows an example of what you now see: a list of items with their required imprest quantities. The next task is to print the list and carry out a physical stock take at the customer site.

First of all, make sure the list is in the correct order. If it is, fine. If not, re-order it as appropriate (by clicking on the column headers or dragging items up or down the list) and click on the *Save Sort Order* button.

Now print the list by clicking on the *Print* button and selecting the “Customer stock takes” option.

The print dialogue opens. Here you can add header and footer information for your printouts. Press OK when ready and print the list.

A screenshot of a print dialogue box. It has sections for Header, Footer, Destination, and Report name. The Header section has a text input field and a dropdown menu showing 'none'. The Footer section has two text input fields and a dropdown menu showing 'page'. The Destination section has four radio buttons: 'Printer' (selected), 'Open in Excel', 'Save as HTML file', and 'Save as Text file'. There is also a checkbox for 'Preview on screen before printing' which is unchecked. To the right of the Destination section is a 'Choose report type' dropdown menu showing 'default'. At the bottom, there is a 'Report name : customer_stock_takes' label and two buttons: 'Cancel' and 'OK'.

[illegible]

Please note that after printing the list you should not re-order it - it will be confusing later when you come to enter the counted quantities for each item.

Now, using the printout, carry out the actual stock take.

Updating the stock quantities

After carrying out actual stock take at the customer's site it's time to enter the actual stock quantities. In the window displayed below, edit the value in the *Customer Current Stock on Hand* column with the stock take quantities you've written on the print out for each item.

mSupply automatically completes other two columns, *Suggested Quantity* and *Actual Quantity* (The simple formula $\text{Imprest quantity} - \text{stock remaining} = \text{order quantity}$ is used to fill in these columns).

When you've selected batches for every line, make sure the *Hold* checkbox is not checked then confirm the invoice to assign the stock to the customer. Now all you have to do is print off the pick list, physically pick the stock off the shelves and send it to the customer. Congratulations - job done!
