

26.15. Authorisation

Sometimes it is important that certain critical processes are not carried out until they have been **authorised**. mSupply allows authorisation to be set according to local needs for:

- [Purchase orders](#)
- [Goods receipt notes](#)
- [Supplier invoices](#)
- [Customer invoices](#)

Requisitions can be authorised using the remote authorisation app. See the [26.15. Remote authorisation](#) page for details about that.

Invoices can be edited after authorisation but **goods receipt lines cannot be unauthorised** to fix mistakes! Any authorising errors can only be fixed using stock adjustments.

When invoices have to be authorised, they **cannot be confirmed until they are authorised**. Until then:

- Unauthorised invoices are held at suggested (sg) status
- The official invoice cannot be printed
- Goods are not removed from or received into stock

Configuring mSupply for authorisation

Turning on authorisation

Authorisation must be set up for **each store independently**. For each store, you can decide which transaction types require authorisation.

To do this, choose *Special > Show stores* from the menus, double-click on the store you are logged into and click on the *Preferences* tab. Now turn on the authorisation preferences for the transactions you want to be authorised. See the [26.08. Virtual stores](#) page for details on which preferences do what. Click the **Special** tab, then click **Stores**.

Setting up authorisers

Certain users must be designated as authorisers for each store by giving them permissions to

authorise different transaction types.

To do this, choose to *File > Edit users* from the menus and double-click on the user (or change the **Show** drop down list to *Group* and double-click on the group of users) you want to designate as an authoriser and give them the *Authorise purchase orders*, *Authorise goods received*, *Authorise customer invoices* or *Authroise supplier invoices* permissions in the appropriate stores.

See the [25.15. Managng users](#) page for details on where to find these permissions.

Supplier invoice authorisation

When the **Supplier invoices must be authorised** store preference is set, new supplier invoices will contain an **Authorised** checkbox.

An authoriser must check the **Authorised** box before the supplier invoice can be confirmed.

- The **Authorised** box will be disabled for users without permission to authorise.
- If the **OK** button is clicked while the **Authorised** box is *unchecked*, a warning message will appear stating that unauthorised invoices cannot be confirmed and nothing will happen.

The screenshot shows the 'Supplier invoice' window. At the top, there are fields for 'Name' (Abbot Laboratories (singapore PTE.LTD)), 'Entry date' (22/05/2013), 'Confirm date' (22/05/2013), 'Invoice number' (2,010), 'Status' (cn), 'Goods receive ID' (0), 'Purchase Order ID' (0), 'Entered by' (Sussol), and 'Store' (General). Below these are buttons for 'New line' and 'Delete line'. A table with columns 'Item Name', 'Qty', 'Pack', 'Batch', 'Expiry', 'Cost Price', 'Sell Price', and 'Price extension' is visible. The first row contains 'Abacavir 300 mg', '10', '1', '1.1.1', '01/01/2016', '20.00000', '20.40000', and '200.00000'. At the bottom, there are checkboxes for 'Hold', 'Finalize', and 'Authorised' (which is highlighted with a red box). There are also buttons for 'OK & Next', 'Delete', and 'OK'.

If you have permission to authorise a supplier invoice, you can also **unauthorise** it.

- If the invoice has a **new (nw)** status then it has not

been entered into stock. If you unauthorise it, users can edit it and you will still control the process of authorisation before the goods are entered into stock.

- However, if the invoice is **confirmed (cn)**, the goods have already been entered into stock. If you unauthorise it, any changes users make will affect stock levels **immediately**, even though the invoice is not authorised.
- Therefore, only unauthorise a confirmed invoice to make immediate changes yourself, then immediately reauthorise it.
- Alternatively, if goods have not been issued, you can delete the lines off the invoice (and optionally delete the whole invoice) and require users to enter a new invoice to receive the stock. The normal authorisation process will then apply to the new invoice.

Customer invoice authorisation

When the **Customer invoices must be authorised** is set, new customer invoices will contain an **Authorised** checkbox.

An authoriser must check the **Authorised** box before the customer invoice can be confirmed.

- The **Authorised** box will be disabled for users without permission to authorise.
- If the **OK** button is clicked while the **Authorised** box is *unchecked*, a warning message will appear stating that unauthorised invoices cannot be confirmed and nothing will happen.

OK

However, an unauthorised purchase order will print with an **Unauthorised** watermark across it. An authorised purchase order will print without the watermark.

Monitoring authorisations

Printing unauthorised invoices

When an invoice is **not** authorised, it will print with a clear **Unauthorised** watermark. Authorised invoices will print without the watermark.

Viewing authorisation logs

mSupply records the authorisation and unauthorisation of invoices and creates a record every time the authorisation status of an invoice changes.

To view the records, click the **Log** tab of an invoice.

Advanced users can also view all logs by going to **Special** > [View log...](#)
