19.06. Mobile Dashboard set up (after v4.0)

August 2020:

- The instructions on this page are for configuring both:
 - mSupply's legacy web dashboard. This is now superseded by the mSupply Grafana web dashboard
 - mSupply Mobile dashboards. The instruction on this page are still the only way to configure them for mSupply versions 4.0 and later

The following instruction are for setting up dashboards for mSupply versions 4.0 and later. For mSupply versions earlier than v4.0, the dashboard setup is accessed and configured via the mSupply Preferences menu, refer to Dashboard set up (prior to mSupply v4.0).

Before you set the dashboard up you must:

- know what ports are already in use on the server
- have an appropriate SSL Certificate set up.
- make sure your webserver is currently running.

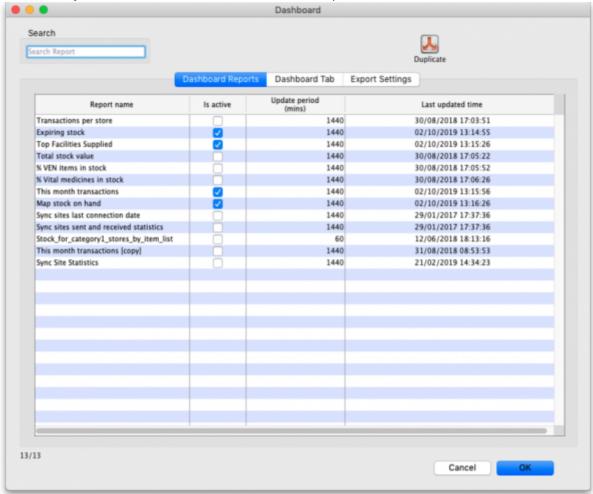

Sustainable Solutions can help with these.

Access the dashboards configuration

1. On the **Admin** tab of the Navigator click on the **Dashboard** button:

2. This will show you a list of the available dashboard reports:

https://docs.msupply.org.nz/ Printed on 2025/08/05 13:22

Configure the dashboards

- Tick the box in the **Is active** column for each report that you want generated. Note that if one
 or more reports are selected, the scheduled process for generating and refreshing the
 dashboard reports is automatically started, there is no separate setting for turning it on and off.
 Similarly, if no reports are selected the dashboard report generating process will be turned off
 automatically.
- 2. Set the number of minutes in the **Update Period (mins)** column to set how often each of these reports is generated. 1440 is one full day.
- The **Export settings** tab is for telling mSupply when and how to update the data behind the dashboard (see the Exporting msupply data to the dashboard tab section below).
- The *Dashboard Tab* tab is for setting up Dashboard tabs (see the *Dashboard tabs* section below) for the Legacy mSupply dashboard. As of 2024, this section is most likely irrelevant.

Available dashboard reports

There are several built-in dashboard reports that everyone can use. The table below documents what they show and what properties can be edited:

If you would like help with adding one of these reports to your list, contact Sustainable Solutions on support@msupply.org.nz

Report	Method	Format	t Parameters					
Expiring		Table,		The number of months before expiry that the report includes (defaults to 3 if this parameter is missing)				
items for Store Shows	dashboardReportExpiringItemList I		storeCode	search for a single store matching this code				
a list of items, for a given store, which will expire within a specified number of months.			dataElement	Looks for the dataElement in the aggregator table. If blank, will default to AMC				
			customisation	allows for a client customisation: currently supports MAM.				
			ven_category	V, E, N or E, N or V, Eetc will filter for the respective VEN values. If blank, no filtering by VEN value				
			chartType	bar, table. If blank, will default to table

stock at each facility				TRUE if you want to include items with this field checked, false for all items			
			store_tags	entering healthcentre will only include stores with the 'healthcentre" tag			
Report	Method	Format	Parameters Parameters				
		/ Table	store_code	search for a single store matching this code			
			lookBack_mon	how many months of data to review when calculating; defaults to 6			
Item Stock on Hand and Months Cover Shows a table o item VEN status Stock on Hand, Monthly Consumption, and Months Cover	dashboard_rep_stock_on_hand		ven_category	V,E,N or E,N or V,Netc will filter the VEN items. If blank all visible items for the store are chosen. If not supplied the filter is not used; specify 'blank' to show items with empty ven. Note: each category in combination must be separated by comma, example: either v,e,n or v,e or v,n			
			item_code	Searches for items matching this code			
			customisation	Allows for a client customisation: currently supports MAM.			

If you can't make a dashboard report that does what you want then please speak to us, it's usually a fairly simple matter for us to create one for you.

Printed on 2025/08/05 13:22

Editing dashboard reports

Double-click a report in the list shown above and the following window will open:

Parameters tab

- If there are any properties shown in the list, these can be edited to change what is displayed.
- To edit a property or value, click once to select the row, and then click again in the appropriate cell to edit it.
- To add or delete a row use the New line and Delete line(s) buttons at the top of the window.
- In the example shown in the screenshot above (a map report), the coordinates of two of the map corners and the item code of the item whose stocks will be shown on the map have been entered. Note that if you add extra properties to the default reports they'll be ignored.

Method code tab

This tab is password protected. After entering the password you are shown the code used to execute the report, which you can edit as necessary.

Json tab

This tab shows the JSON formatted text that was returned from the last successful execution of the report.

Last update: 2024/04/09 02:01

Notification Rules tab

On this tab you can enter JSON formatted text to define the rules for notifying users with the results of the report. To Add, edit or delete any rules you must first click on the **Click to unlock** button and

An example of a valid rule is:

enter the password to allow editing.

```
{"Rules":[{"userTags":["Monthly_report_emails"],"notificationPeriod":1,"last
SentAt":"2022-02-07T08:28:42Z"}]}
```

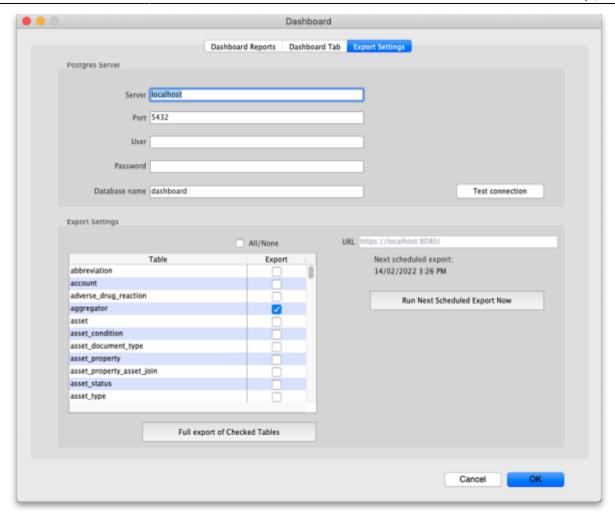

The elements are as follows:

- userTags defines the tags the users must have to be sent the report. Add as many as you wish.
- notificationPeriod the period in whole days between sendings of the report.
- lastSentAt the date and time the report was last sent, in the format YYYY-MM-DDTHH:MM:SSZ. If set to "" (blank) this will trigger the sending of the report when the time in notificationPeriod has elapsed, measured from the time the **OK** button is clicked on this window.

Exporting mSupply data to the dashboard

The mSupply Grafana dashboard has its own separate Postgres database to improve performance and prevent use of the dashboard slowing mSupply down. This means that the data for the dashboard must be exported from the mSupply database to the dashboard's database. You control the settings for this process by clicking on the *Export settings* tab of the window which is displayed when you click on the *Dashboard* icon on the *Admin* tab of the Navigator:

https://docs.msupply.org.nz/ Printed on 2025/08/05 13:22

Postgres server section

Enter the details of the dashboard's Postgres server in here:

- Server: the URL of the server the database resides on
- Port: the port the database is being served on
- **User**: the username mSupply will use to login to the dashboard's database
- Password: the password ms will use ot login to the dashboard's database
- Database name: the name the dashboard's database has been given in Postgres

Test connection button: when you have enetered all the details in this section, click on this button to test the connection to the dashboard's database. mSupply will tell you whether the connection is successful or not.

Export settings section

In the table select the tables in the mSupply database that you want to export to the dashboard. Care needs to be taken here; you need to choose all the tables that will provide the information you need in the dashboard but not those you do not need as this may impact on the speed of the export, and therefore how quickly your dashboard can be updated.

Use the **All/None** checkbox to quickly check or uncheck all the tables in the list.

Last update: 2024/04/09 02:01

The **URL** field shows you the URL that mSupply is exporting the data to.

Full export of Checked Tables button: Clicking this will force mSupply to empty the dashboard database and export all the data from the selected tables to the dashboard database.

Run Next Scheduled Export Now button: Clicking this will make mSupply immediately export to the dashboard database all the data that has changed in its database since the last export to the dashboard.

When these settings have been saved, mSupply will use them to automatically export the selected data to the dashboard according to the schedule that has been set.

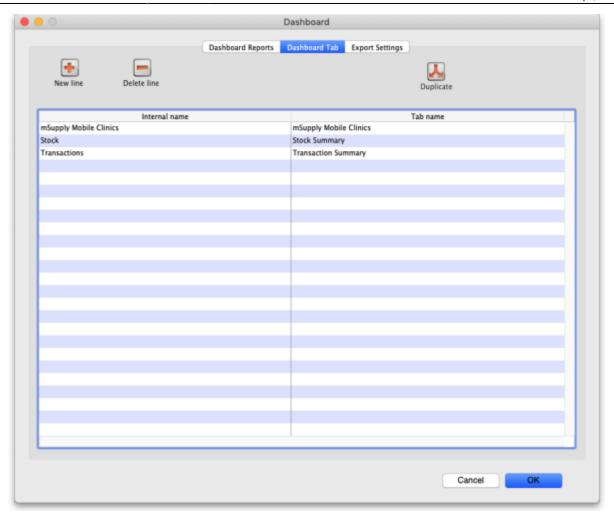

August 2020: The remaining instructions on this page are for configuring mSupply's legacy web dashboard. This may still work, but is no longer supported as it has been superseded by the mSupply Grafana web dashboard. The instructions are left here for historic reference only.

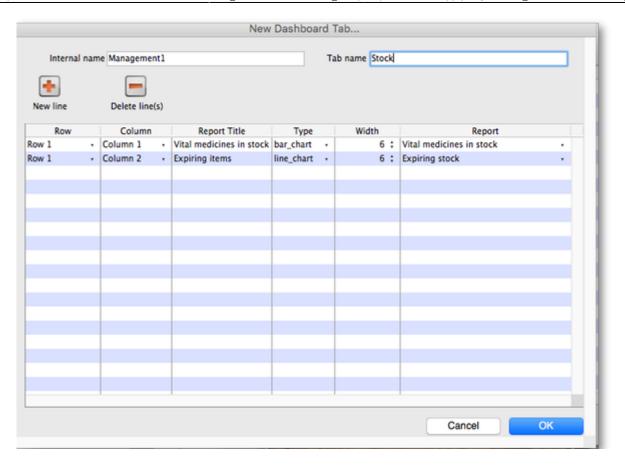

Dashboard tabs

You set up Dashboard tabs which will display on your dashboard. Dashboard tabs are "containers" for one or more dashboard reports. To edit them click on the *Dashboard Tabs* tab of the window which is displayed when you click on the *Dashboard* icon on the *Admin* tab of the Navigator:

https://docs.msupply.org.nz/

To add a tab click the **Add** button. To edit a tab, double-click it. You will be shown a window for editing a dashboard tab:

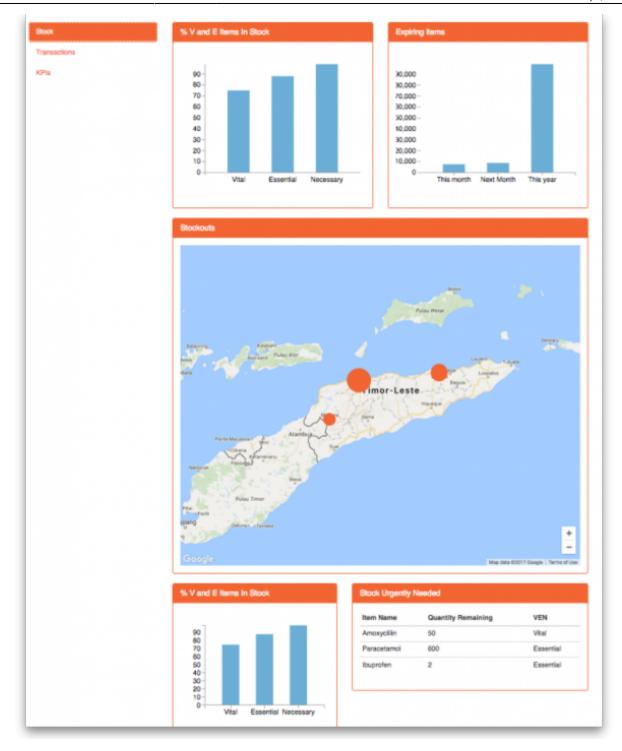

Now you add reports that will show on this tab.

Understanding rows and columns

Take this example dashboard tab:

https://docs.msupply.org.nz/ Printed on 2025/08/05 13:22

- The tabs themselves occupy their own space on the left of the window- they aren't considered when laying out the dashboard
- The first row has two reports- each report takes up half the row. So for the first report:
 - Row 1, Col 1, width 12 ("12" means it takes up the full width of the cell it is in- "4" would mean it would take up 1/3 of the width)
- For the report at the top right:
 - Row 1, Col 2, width 12
- For the map
 - Row 2, Col 1, width 12
- The next two reports are on the same row, but are divided into 5/12 and 7/12 of the width of the window, so we put them in the same cell but change the width settings:
 - ∘ Row 3, Col 1, width 5
 - Row 3, Col 1, width 7

Last update: 2024/04/09 02:01

Adding a report to a dashboard tab

Click **New Line** to add a new report to the tab. Then edit the values in each column

- Row: The row it will be in
- **Column:** The column within the row- set to "1" if you don't have multiple reports on this row.
- **Report tite:** The title that will show in the Orange heading bar for the report. Note that the same report can display different information depending on the parameters you set for that report- hence the need for the ability to customise report names
- Type: You'll need to know the appropriate type for the report you're displaying. The options are
 - bar chart
 - ∘ table
 - ∘ pie chart
 - time_series
 - ∘ map
 - ∘ line chart
- **Width:** The fraction of the cell width in "twelfths" that this report will take up ("6" will make it take up half the cell width)
- **Report:** Choose the report name from the drop-down list of available reports

Configure users to have access to dashboards

Once the tabs have been setup you have to choose which users will see which tabs. You do this in individual users' settings. For instructions on how to do this, see:

- Managing users > General tab > Users can: (Use the Dashboard permission)
- Managing users > Dashboard tab
