Barcode scanning and pick list checking

Added: Version 4.01

Another way barcode scanning can be useful is in checking that goods picked off the shelf for distribution to a customer match what was on the pick list.

This is done when distributing goods to a customer on a customer invoice. When the preference to use barcode scanners is turned on (see Barcode scanning preferences), the customer invoice window for new or suggested status customer invoices has a new *Pick list check* button:

When you have finished adding lines to the customer invoice, you print the pick list in the normal way (see Issuing goods to a customer (customer invoices))

// Previous: Barcode scanning and stocktaking Next: Barcode label printing//
