

Procedures

 Internally, a procedure in HIS is treated like a service item in mSupply, so many of the same concepts apply - see [Items](#)

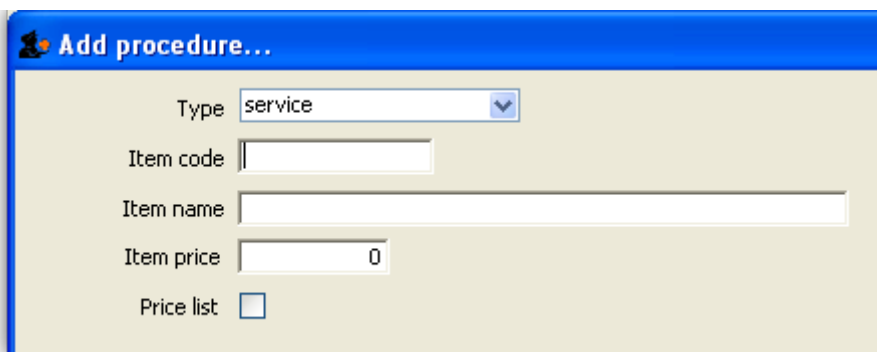

The **Special > Show procedures** menu item allows you to track surgical and other procedures performed on patients. It brings up the following window:

After setting the parameters, and clicking on OK, it will either show the list of procedures:

in which case, you can double-click on a procedure to view/edit it or select *New item* to create a new one. Or, if there are no existing procedures, it will go straight to the *Add procedure* window:

The type of a procedure is fixed as “service”. As for items, once a procedure has been added, there are extra fields and tabs available. However, only a subset of the normal item fields are available.

The screenshot shows a 'Procedure details...' window with a sidebar on the left containing 'General', 'Usage', 'Ledger', 'Notes', 'Misc', and 'Misc 2'. The main area is titled 'Item name New Procedure' and includes a 'Store:' dropdown set to 'Hospital Info System'. The 'General...' section contains fields for 'Item code' (value: abcdef), 'Category' (value: None), 'Item flag', and 'Catalogue code', along with a 'Hide in this store' checkbox. The 'Pricing' section has 'Default margin' (value: 0) and 'Default price' (value: 2,000.00). The 'Full description' section is a large empty text area. The 'Custom fields...' section contains seven input fields labeled 'user_field_1' through 'user_field_7', with checkboxes next to 'user_field_4' and 'user_field_7'.
