

14.04. Procedures

 Internally, a procedure in HIS is treated like a service item in mSupply, so many of the same concepts apply - see [Items](#)

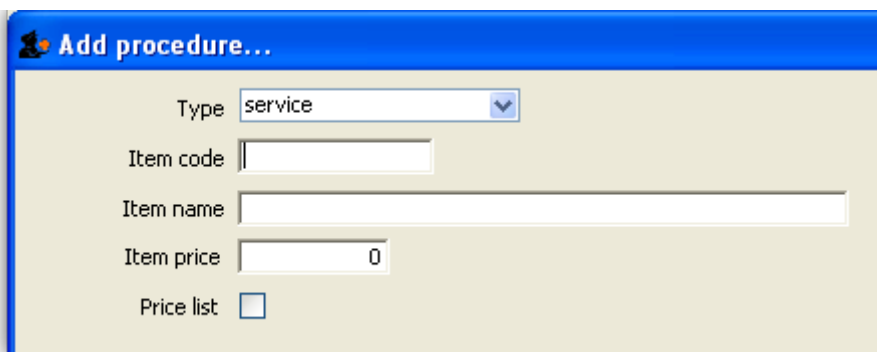

The **Special > Show procedures** menu item allows you to track surgical and other procedures performed on patients. It brings up the following window:

After setting the parameters, and clicking on OK, it will either show the list of procedures:

in which case, you can double-click on a procedure to view/edit it or select *New item* to create a new one. Or, if there are no existing procedures, it will go straight to the *Add procedure* window:

The type of a procedure is fixed as “service”. As for items, once a procedure has been added, there are extra fields and tabs available. However, only a subset of the normal item fields are available.

The screenshot shows a 'Procedure details...' window with a blue title bar. On the left is a sidebar with a tree view containing 'General', 'Usage', 'Ledger', 'Notes', 'Misc', and 'Misc 2'. The main area is titled 'Item name New Procedure' and has a 'Store:' dropdown set to 'Hospital Info System'. It is divided into several sections: 'General...' with fields for 'Item code' (abcdef), 'Category' (None), 'Item flag', and 'Catalogue code', plus a 'Hide in this store' checkbox; 'Pricing' with 'Default margin' (0) and 'Default price' (2,000.00); 'Full description' with a large text area; and 'Custom fields...' with seven input fields labeled 'user_field_1' through 'user_field_7', each with a checkbox to its right.
