

## Exporting names

Choosing *Export names* from the *File* menu exports all the names (suppliers, patients, manufacturers, donors and customers etc.) in your data file in exactly the same way as for [exporting items](#).

The field order of the exported file and the contents of the various fields are exactly the same as for [importing names](#) so please see there for details.

*Previous: [Exporting items and stock](#) Next: [Exporting to MYOB](#)*
