

## 14.05. Importing abbreviations

Importing abbreviations is a great way of quickly entering a large number of abbreviations for use in [dispensary mode](#) (see the [Abbreviations](#) section for details).

To create the import file, create a spreadsheet with two columns like this:

|   | A             | B                    |
|---|---------------|----------------------|
| 1 | <b>Abbrev</b> | <b>Expanded text</b> |
| 2 | od            | once daily           |
| 3 | bd            | twice daily          |
| 4 | tid           | three times daily    |
| 5 | tds           | three times daily    |
| 6 | qid           | four times daily     |
| 7 | qds           | four times daily     |
| 8 | ac            | before food          |
| 9 | pc            | after food           |

Enter the short abbreviation you will type in the *Abbreviation* column. Enter the text this will be expanded to in the *Expanded text* column. Make a new row for each abbreviation.

Note: your abbreviations cannot contain the underscore (\_), period (.) or comma (,) characters

When the spreadsheet is complete, export it as a tab delimited text file.

Close the spreadsheet application then choose **File > Import > Import abbreviations...** from the menus in mSupply. Select the file you just created in the window that opens (navigate to it and either double-click it or single-click on it and click on the **Open** button). The following import options window will be displayed:
