

Invoice Authorisation

*

mSupply provides the feature of subjecting Customer and Supplier Invoices to authorisation. Authorisation may be done for a number of reasons, typically value based, and may set to be allowed by only a restricted user or set of users. <note>Invoices that are subject to authorisation and are unauthorised are held in status 'sg' or suggested status. This means the official invoice can not be printed until the invoice is authorised.</note>

Configure mSupply for Invoice Authorisation

- Set Store preferences to allow for authorisation of invoices. Click drop down menu **Special> Store..** click tab **Preferences** and check boxes **Customer invoices must be authorised** and **Supplier invoices must be authorised**. Click OK to return to the Navigator.

Create a Supplier Invoice for authorisation

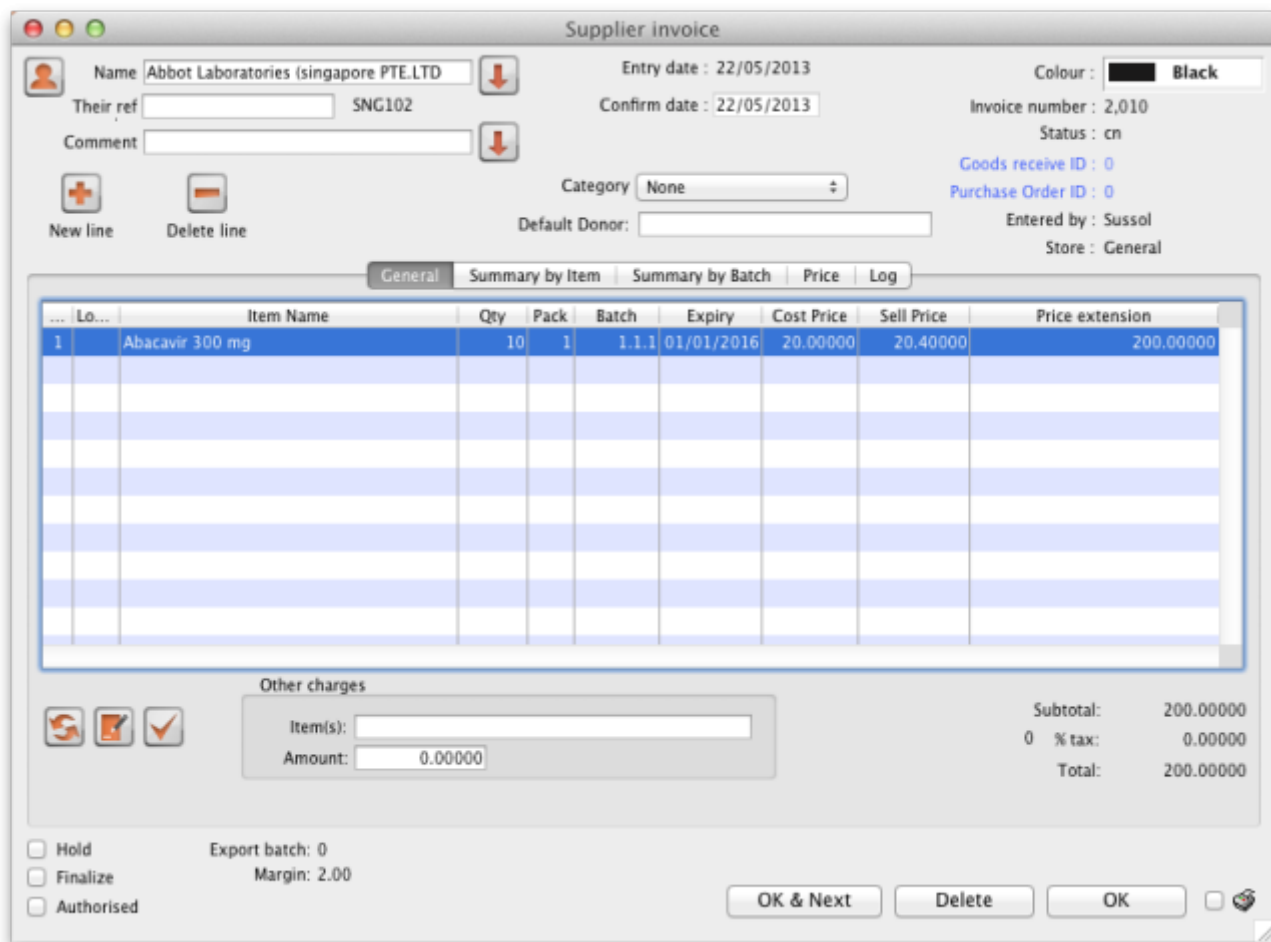

From the Navigator click section Suppliers and click New Supplier Invoice. Enter your supplier and add items to the Invoice.

Click the authorise button at the bottom left of the window.

Create a Customer Invoice for authorisation

From the Navigator click section Customers and click New Customer Invoice. Enter your customer and add items to the Invoice.

Click the authorise button at the bottom left of the window and click OK to return to the Navigator.

<note>Log in as another user while the invoice is not authorised to show the user can't confirm the invoice.</note>

Print an invoice with Authorisation status set

When an invoice is not authorised an attempt to print it will produce an invoice with an 'unauthorised' watermark.

- From the Navigator click section **Customers** and select **View Customer Invoices**
- Select an invoice with unset authorisation.
- In the main invoice window that appears select the **Print** check box at the bottom right and click **OK**.
