

A screenshot of a 'Find Item...' dialog box. It has a blue title bar with a close button. The dialog contains several dropdown menus for filtering: 'Item name' (with a dropdown arrow), 'starts with' (with a dropdown arrow and an empty text field), 'and' (with a dropdown arrow), 'category is' (with a dropdown arrow showing 'Don't Care'), 'and' (with a dropdown arrow), 'VEN category is' (with a dropdown arrow showing 'Don't Care'), 'and' (with a dropdown arrow), and 'department is' (with a dropdown arrow showing 'Don't care'). Below these is a 'Randomly' checkbox (checked) and a text field with '0' items from returned list. At the bottom are three buttons: 'Complex Find', 'Cancel', and 'Find'.

The items list will now display any invisible items and you will be able to make them visible again in the store tab.

If your mSupply system is a Primary - Satellite synced system, you can only change visibility of items on the Primary server.
