

## Contacts...

This command from the *Special* menu displays a window where you can edit contacts.

Contacts are usually associated with a name (a customer or supplier), and it is easier to edit such contacts using the “show suppliers...” or “show customers...” command.

If a contact is not associated with a name, you can edit details for that contact using this command.

### Buttons in the contact list window:

**New:** Use to add a new contact.

**Report:** Presents the Quick report editor window. [See Using the Query Search editor.](#)

**Find:** Use to find an individual contact

**Order by:** sort the contacts

**Print:** *clicking this button will present you with a dialog with two choices:*

- If you click *list* a list will be printed of the records in the window.
- If you choose *labels*, you will be shown the label editor, allowing you to print a set of address labels for the current list of contacts. Note that you can save a particular label layout and then use the *load* command in the label editor to restore your layout.

**New:** To edit a contact, double-click on the line you want to edit. You will be shown the contact details:
