Using the mSupply Remote Client

As well as using an mSupply client connecting to a local mSupply server, or using a standalone version of mSupply, it is possible to access a copy of mSupply running on a remotely hosted server. In this case, we use remote access software called TSplus (http://www.tsplus.net).

Connecting to mSupply

The first time you run the remote access client, you'll have to enter your TSplus username and password. These correspond to a Windows account on the remote server and are completely separate from your mSupply username and password.

퉋 Remote A	ccess	_		×
Logon Password	o save credentials		Conne	ect

We recommend that you select the "Allow me to save credentials" box so that you don't have to remember it in future.

After clicking *Connect*, you may get a warning Window similar to this one:

Nemote Desktop Connection							
The publisher of this remote connection can't be identified. Do you want to connect anyway?							
This remote connection could harm your local or remote computer. Do not connect unless you know where this connection came from or have used it before.							
	Publisher:	Unknown publisher					
-00	Туре:	Remote Desktop Connection					
	Remote computer:	and the second					
Don't ask me again for connections to this computer							
Show Details Connect Cancel							

If so, then select the "Don't ask me again for conections to this computer" box to avoid seeing it again in future.

You should then see the normal mSupply login screen - simply login as usual to get to the mSupply navigator, which looks exactly the same as normal except that it is enclosed in a session window:

Last update: 2017/07/19 04:43

When you're finished, exit mSupply by using the *File* \rightarrow *Exit mSupply* menu item. If you simply use the *X* button at the top right of the session window, it will close the window but mSupply will continue to run on the server, and use a license which may be needed by someone else.

Printing from mSupply

Because mSupply is running on a remote server, printing forms and reports is slightly different as there is an extra step involved to download them to your local computer. There are several ways to do this, depending on which print option you choose e.g. printing a customer invoice:

2 •	Printing options	_ □ ×
Form to use Delivery not	De:	 Remember this choice Print dispatch labels stination Printer Preview PDF file on disk Email PDF Export to Excel
	C	ancel OK

Universal Printer

TSplus comes with a "Universal Printer" driver, and if you select the *Printer* option and then choose this as your printer, the print job should get downloaded to your local computer and then prompt you to choose one of the printer drivers on your local computer to receive the print job.

	Print	x
Printer		
Name:	Universal Printer	✓ Properties
Status: Type:	Foxit Reader PDF Printer Microsoft XPS Document Writer Universal Printer	
Where:	CPWPU997:	
Comment:		Print to file
Print range		Copies
● All		Number of copies: 1
 Pages Selection 	from: to:	11 22 33 Collate
		OK Cancel

PDF Printer

Foxit or some other virtual PDF printer driver will have been installed on the remote server. You can either:

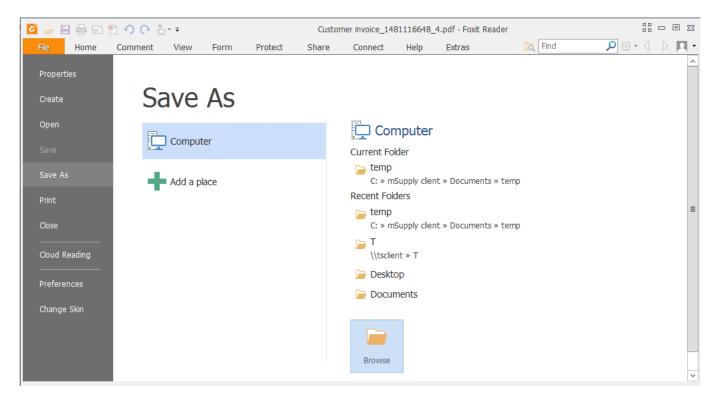

- select the *Printer* option and choose the virtual PDF printer driver as your printer this will
 prompt you for a location to save the PDF file and then open it in the default PDF viewer (you
 may be prompted to choose either Foxit or Sumatra the screen shots below use Foxit, but
 Sumatra is similar)
- select the *Preview* option this will generate a PDF file in the default location (*C*:\mSupply

client\Documents\temp) and then open it in the default PDF viewer

• select the *PDF file on disk* option - this will generate a PDF file in the default location and open that folder, and then you can double-click on the file to open it in the default PDF viewer

Image: Second	~

Regardless of which of these you choose, you can use $File \rightarrow Save As$ to save the PDF file to a folder on your local computer:

Click on *Browse* to choose where to save it - *This PC* includes all of your local drives as well as the ones on the remote server:

Exporting to Excel

MS Office won't normally have been installed on the remote server, but Open Office will have been. The first time you try to export to Excel, you'll have to choose the location of "Excel" - in this case, it will be something like C:\Program Files(x86)\Open Office 4\program\scalc.exe.

Select the *Export to Excel* option to open the report/form in Open Office:

1		Customer inv	oice_1481118462_4_1	.xlsx -	OpenOffice C	Calc				_
<u>F</u> ile	<u>E</u> dit <u>V</u> iew <u>Insert</u> F <u>o</u> rmat <u>T</u>	<u>I</u> ools <u>D</u> ata <u>W</u> indow <u>H</u> elp

In the same way as for PDFs, you can select a local drive from the *File* \rightarrow *Save As* menu (either as an Open Office .ods document, or an Excel .xls document):

Transferring Data

Dropbox will have been installed on the remote server, and can be used to transfer saved reports or other data between the server and any other computer which has access to the Dropbox account.
